

Hydroxy Chloroquine the Malaria drug is found to be effective in dealing with COVID-19. However, it proves to be risky as it may cause cardiac problems. My suggestion is to use the Homeopathic procedure of dilution of this chemical to several stages of dilution and it may be useful in arresting this virus COVID-19. What I am suggesting is Allopathic drug administration using Homeopathic procedures.

Also, same can be done for the effective Anti-parasitic drug found to be effective in Australia - IVERMECTIN.
